

Buss ChemTech AG is a global leader in innovative process technologies for the Chemical and Aluminum Industries. With our specific chemical processes and our own process developments, we enable our customers to achieve high savings in their production processes. Our engineering services range from studies and trials in our own pilot plant to turnkey production plants.

Do you like to travel? Do you appreciate dealing with foreign cultures? Then you have come to the right place- As a

Project Manager (m/f)

you will manage international projects in process plant engineering.

Your responsibilities:

- Responsible for commercial processing of customer orders from receipt of order to expiration of warranty period.
- Planning the project schedule and determining the necessary human and financial resources. Leading the project team.
- Ensuring that customer projects are completed on budget and on time while adhering to the required quality guidelines.
- Ensuring communication with the customer.
- Deadline and cost control.
- Development of concepts, schematics, specifications for suppliers as well as technical processing of engineering tasks.
- Accompanying the sales department in the final contract negotiations.

Our requirement:

- You are an independent, proactive personality with strong solution-oriented thinking and acting.
- You have a degree in chemical/process/mechanical engineering and several years of professional experience in the field of plant and/or chemical plant engineering.
- You have already successfully handled customer orders in plant and/or chemical plant engineering as a project manager and are familiar with the "language" in engineering.
- In addition to the usual office programs, you have knowledge of CAD and calculation programs for the construction and design of components in plant engineering.
- Very good English skills complete your profile.

Your environment: You will work in a versatile, multidisciplinary environment and have the corresponding freedom to act and make decisions. We offer you a modern office with appropriate infrastructure, above-average social benefits and the unusual opportunity to develop professionally and personally in the international environment of a technologically leading company.
